Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-26 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Regarding claim 1, the claimed subject matter “A processor readable medium storing at least command” is directed toward a software program per se. Since a computer program is merely a set of instructions capable of being executed by a computer, the computer program itself is not a process. In contest, a claimed computer-readable medium encoded with a data structure defines structural and functional interrelationships between the data structure and the computer software and hardware components which permit the data structure’s functionality to be realized, and is thus statutory.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, the claim language is so indefinite as to obscure what's being claimed, i.e., claim 1 recites the limitations “the command instruction set having a format in which a packet address,..., is specified in terms of a first portion...and a second portion” in lines 3-5, and “the at least one command specifies deriving at least a portion of a first packet from data taken from a second packet or the command” in lines 7-8. (1) It is unclear as to whether there is a functional or structural connection between “a portion of a first packet from data taken from a second packet” and “a packet address” that is specified in terms of “a first portion and a second portion”. (2) It is unclear as to what the intended claiming limitation is by reciting “from data taken from a second packet or the command” in “the at least one command specifies deriving at least a portion of a first packet from data taken from a second packet or the command” in lines 7-8. (3) As the “at least command” appears to refer to instruction codes, it is unclear whether the function of the command is to specify deriving at least a portion..., or to have a format corresponding to the command instruction set.

Claim 21 recites the limitation “the unmodified data”. There is insufficient antecedent basis for this limitation in the claim.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Comeau (US 2002/0103942); Noel,JR.et al. (US 2004/0049582) are cited to show packet data modification processor command instruction set, which is considered pertinent to the claimed invention.
